ORGANICALLY CHELATED TRACE ELEMENT, VITAMIN AND AMINO ACID SUPPLEMENT

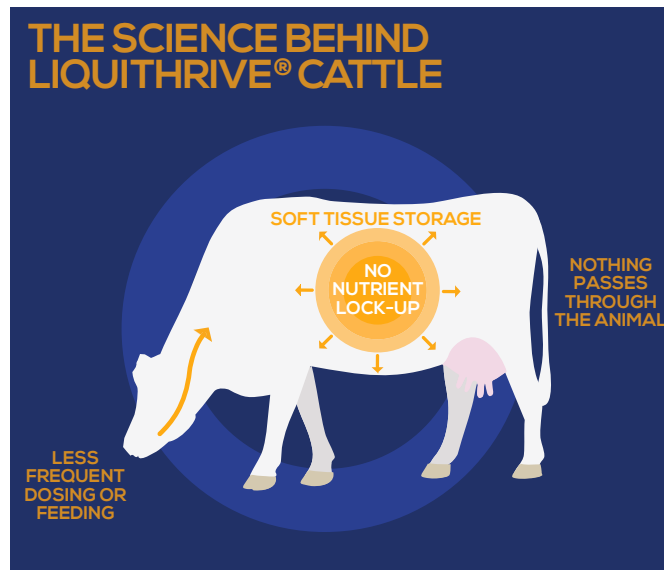

Liquithrive® Cattle is an organically chelated trace element, vitamin and amino acid supplement for growing and finishing cattle.

Liquithrive® Cattle can help growing stock realise their full potential by supporting immunity and appetite, leading to improve live weight gain and killing out percentages.

Liquithrive® Cattle is formulated based on the clinically known needs of growing cattle with a high bioavailability of micro-nutrients to correct nutritional imbalances.

A high level of bioavailability means that trace elements and minerals are absorbed by the small intestine and stored in the soft tissue creating a reservoir of nutrients to be used when needed.

THE SCIENCE BEHIND LIQUITHRIVE® CATTLE

Liquithrive® drenches are designed to balance trace element, vitamin and amino acids meeting the requirements in advance of key stages of the production cycle such as:

- Introduction of bought in cattle
- Dietary changes
- Dehorning
- Weaning
- Turn out
- Housing

Liquithrive® Cattle is best used in conjunction with a traditional mineral supplement to ensure cattle have a solid foundation of base minerals at which time, Liquithrive® Cattle should be used to correct any imbalances.

Achieving overall balance and creating high bioavailability is more important than correction of specific deficiencies, or, over correction caused by flooding the body with too much of a certain mineral.

Liquithrive® Cattle is available as a drench or a Dry Powder Formulation (DPF) for inclusion in the daily diet either in the Total Mixed Ration (TMR) or top dressed.
