COMPLEMENTARY FEEDING STUFF  
FOR RUMEN HEALTH

 **Agri-Lloyd**

THE SECRET'S IN THE SCIENCE®

## RUMEN STABILISING AID

Maximise® is a unique rumen function enhancer, specifically designed to help improve digestion and maximise feed intake for young stock and breeding ewes. Maximise® contains a unique blend of metabolites, malic acid and added cobalt and vitamins.

Metabolites are the by-product of fermented yeast and have a pre-biotic action within the rumen. The metabolites support microbial activity in the rumen by 'feeding' the good microbes to increase their numbers.

## MAXIMISE 84®

Maximise 84® is designed for breeding ewes to promote good health and condition of the ewe pre and post lambing. It is particularly helpful in supporting ewes carrying multiple lambs where there is a large demand for energy.

## MAXIMISE 56®

Maximise 56® is designed for growing lambs to help stabilise the rumen pH and improve digestion which will subsequently support the immune system and overall health. Maximise 56® works by helping the young lamb to develop robust rumen micro flora and can be fed from 6 weeks of age.
