# MAXIMISE® SHEEP

---

RUMEN FUNCTION ENHANCER, FOR SHEEP AND GROWING LAMBS SPECIFICALLY DESIGNED TO HELP IMPROVE DIGESTION AND MAXIMISE FEED INTAKES, THEREBY REDUCING FEED COSTS.

## THE BENEFITS OF MAXIMISE® SHEEP

- Metabolites are immediately available to the rumen microbes
- Added key nutrients to support sheep health and immunity
- Stable product which does not degrade
- Ideal for batch feed mixes
- Unaffected by dietary changes.

ENERGY

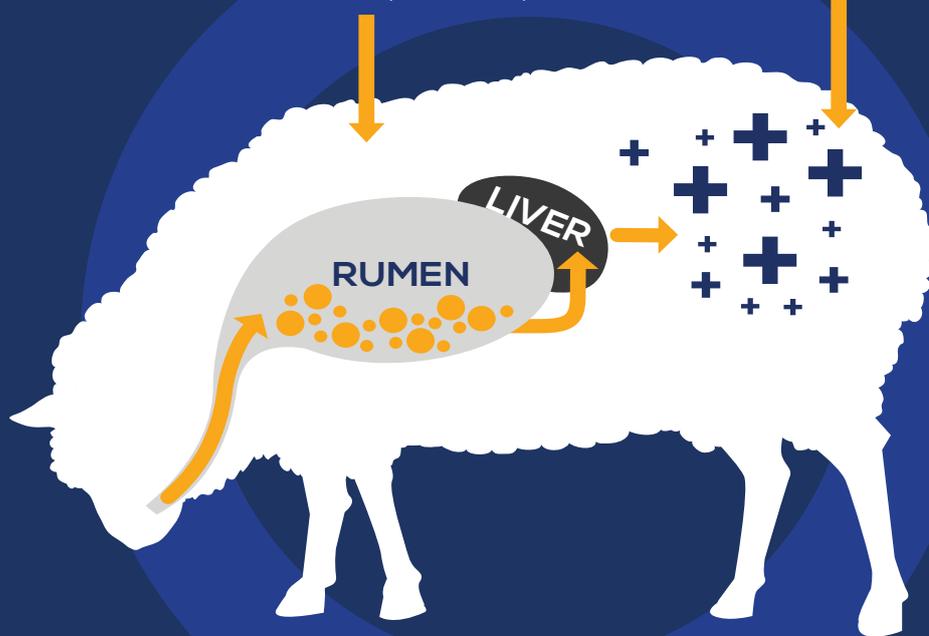

Body Condition Maintenance

Health and Immunity

Live Weight Gain

2 VOLATILE FATTY ACIDS (VFAs)

3 ENERGY

1 MAXIMISE® SHEEP

**MAXIMISE® SHEEP IS A UNIQUE RUMEN FUNCTION ENHANCER, SPECIFICALLY DESIGNED TO HELP IMPROVE DIGESTION AND MAXIMISE FEED INTAKES.**

**MAXIMISE® SHEEP CONTAINS A UNIQUE BLEND OF METABOLITES, MALIC ACID AND ADDED COBALT AND VITAMINS.**

**MAXIMISE® SHEEP contains:**

### **PREBIOTIC YEAST**

Prebiotic yeast supplies metabolites to the rumen which supports the microbial activity in the rumen by feeding the “good” microbes to increase their numbers. This allows for increased rumen fermentation of the feed to produce volatile fatty acids (VFAs) which are the main energy source for ruminants.

### **COBALT**

Cobalt is an essential trace element required by ruminants, due to its function as a component of vitamin B12 which is needed for appetite, energy metabolism and cell replication.

### **MALIC ACID**

Malic acid aids in stimulating the growth of specific rumen bacteria to promote lactic acid utilisation. Malic acid can help towards improving the rumen environment and supports VFA production.

### **VITAMIN A**

Vitamin A is important for growth performance and immune response.

### **VITAMIN E**

Vitamin E is an antioxidant so can protect cells against oxidative damage, which helps maintain immune function and sheep health.

## Why choose MAXIMISE® SHEEP?

MAXIMISE® SHEEP is designed to help stabilise the rumen pH and improve digestion which will subsequently support the immune system and overall health.

MAXIMISE® SHEEP can be fed to breeding ewes to promote good health and body condition of the ewes pre- and post-lambing. It is particularly helpful in supporting ewes carrying multiple lambs where there is increased demand for energy.

MAXIMISE® SHEEP can also be fed to growing lambs to help stabilise the rumen pH and improve digestion. Supplementation with MAXIMISE® SHEEP works by helping the development of a robust rumen micro flora and can be fed from 6 weeks of age.

# KEY BENEFITS OF MAXIMISE<sup>®</sup> SHEEP

Support the development and maintenance of a healthy and robust rumen micro flora

Supports the production of volatile fatty acids in the rumen

Supports the immune system of ewes and lambs

Helps improve growth rates of lambs

A constant and available source of VFAs can help reduce energy deficit in pregnant ewes and support healthy birth weights of lambs.
